Oxford Handbook of Emergency Medicine - Oxford Medicine
Orthopedic surgery or orthopedics, also spelled orthopaedics, is the branch of surgery concerned with conditions involving the musculoskeletal system. Orthopedic surgeons use both surgical and nonsurgical means to treat musculoskeletal trauma, spine diseases, sports injuries, degenerative diseases, infections, tumors, and congenital disorders.

MEET OUR PHYSICIANS. There's a very good reason why the word "specialist" is in our name. All of our physicians are board-certified and fellowship trained in their chosen orthopaedic subspecialty.

Our Physicians | Connecticut Orthopaedic Specialists
Grade A: Complete neurological injury - no motor or sensory function clinically detected below the level of the injury. Grade B: Preserved sensation only - no motor function clinically detected below the level of the injury; sensory function remains below the level of the injury but may include only partial function (sacral sparing qualifies as preserved sensation).

An implant is a medical device manufactured to replace a missing biological structure, support a damaged biological structure, or enhance an existing biological structure. Medical implants are man-made devices, in contrast to a transplant, which is a transplanted biomedical tissue. The surface of implants that contact the body might be made of a biomedical material such as titanium, silicone ...
